Semi-H-Frame

Canister Desiccant Feeder Upgrades

CDF & CDFI Frames

Existing Omega CDF (Rotary) and CDFI (Intermittent/Shuttle) desiccant feeders were mounted on a Y-shaped frame with casters.

It has come to our attention that on several occasions and while the machines were being rolled from one line to another, they tipped over. To address this, we are offering existing CDF and CDFI users, either an H-frame or semi H-frame base replacement. This retrofit can be done by the end user in the field.

*H-frame can take several hours to install, but has a better finished look than the semi H-frame. The H-frame is now a standard for CDF, CDFI and CDFS models.

**Semi H-frame offers improved stability over the Y-frame, with less down time for installation
