Syrelec Time Delay Relay

Managing Obsolescence

Unscramblers/Desiccant Feeders

Syrelec time delay relays have become obsolete, difficult to locate and if found, very expensive.

The appropriate replacement is the Allen Bradley Micrologix PLC. Micrologix offers better control, more flexibility, supported by Omega/Allen Bradley, same programming platform (RS Logic) as the more expensive AB 500 series PLC.

The upgrade requires an Omega service technician, estimated at 1-2 days of in plant time, plus all travel and living related expenses.
